Re: Notification of Substantive Change, Structure and Practices of the Video Relay Service Program, CG Docket No. 10-51; Telecommunications Relay Service and Speech-to Speech Services for Individuals with Hearing and Speech Disabilities, CG Docket No. 03-123—47 C.F.R § 64.606(f)(2)

Dear Ms. Dortch:

This Notice of Substantive Change is being provided pursuant to 47 CFR §64.606(f)(2) regarding a substantive change in Purple Communications, Inc. (“Purple”) services and features.

On October 31, 2016, Purple reinforced its CARES commitment to continue innovating and driving high-quality products and call notification technology for our consumers by the release of its upgraded P3 Mobile Video Relay Service (VRS) app with added Push Notifications for the Android platform.

Purple’s upgraded P3 Mobile app for Android offers the following enhancements:

- Push Notifications is a feature of the Android operating system that can be adopted by third-party apps to actively alert phone owners of incoming calls, even when their phones are in sleep mode or are locked.
- Purple’s P3 Mobile for Android now provides visual and vibration notification when a user has an incoming call.
- This upgrade to P3 Mobile with Push Notifications also “wakes up” the phone to provide an alert of a missed call (if the incoming call was not taken) as well as a similar notification if a caller left a message within P3 Mobile’s PurpleMail mailbox.
- Push notifications for incoming calls may require a minimum OS version.

Purple does not expect the changes documented herein to affect its compliance with applicable minimum standards.

Respectfully submitted,

PURPLE COMMUNICATIONS, INC.

/s/

Michael Strecker

Vice President of Regulatory and Strategic Policy
